SCALABLE BRAIN PLATFORM · ARCHITECTURE & OPERATIONS SYNTHESIS

Scalable Brain: Catch-Up & Development Milestone Report

Complete Technical Audit of System Building, Infrastructure Migration, Go-Live Hardening, and Quantitative Strategy Pivot (August – October 2026)

DATE	EXECUTION HOST	DEPLOYED PIN	EXECUTION STATE
2026-10-20	Computer 4 (Native Win 11)	17827c5 (Prod Verified)	OANDA Practice Live (S2+S3)

Executive Summary

Over the past months, rapid engineering across Claude, Gemini, and the lead developer transformed Scalable Brain from a fractured, cloud-dependent, three-machine prototype running unreliable single-pair indicators into a consolidated, highly disciplined, institutional-grade quantitative trading platform.

This comprehensive report synthesizes the three monumental phases completed during this period:

1. **The Full Cutover from GCP to Computer 4 (2026-10-08 to 2026-10-16):** Decommissioning Google Cloud Platform entirely (Cloud Run, 5 Pub/Sub topics, Cloud Storage, VM `trading-1`), rescuing untracked state machines, resolving Windows mandatory file locking via atomic POSIX primitives, restoring 21.7M PostgreSQL price rows with zero differences, and deploying local service supervisors.
2. **Trading Execution & Go-Live Hardening (2026-10-15 to 2026-10-18):** Executing the practice cutover on OANDA demo account, un-pausing Guardian System 3, resolving the 5 tradable strategies, and implementing mission-critical broker safeguards (`priceBound` slippage caps, dynamic spread guards, rollover hold, weekend stop-loss enforcement, and environment isolation).
3. **The Quantitative Research Revolution (2026-10-18 to 2026-10-20):** Scientifically proving that single-pair technical indicator rules (the legacy 67 strategies) are net negative-sum under retail spreads and financing drag; establishing a Point-in-Time (PIT) data engine with zero look-ahead; registering 23 hypothesis cards; killing classic benchmarks; and qualifying the **Weak-Voters Committee (H-20261019-04)** to PROMISING / SHADOW status.

> **Key Takeaway:** Scalable Brain has successfully crossed the barrier from infrastructure construction to genuine quantitative alpha testing. The operational foundation on Computer 4 is clean, self-healing, and actively trading on practice capital, while the research fleet is focused on macroeconomic premia and ensemble committees.

1. Strategic Roadmap & Scope Reconciliation

To establish clarity moving forward, all historical goals and tasks have been audited and sorted into four distinct categories:

Category	Description & Scope Boundaries	Primary Items & Focus
COMPLETED	Proven engineering deliverables with verified artifacts and green tests.	Computer 4 cutover (O-33), GCP shutdown, Postgres 16 plain restore (21.7M rows), practice cutover (2026-10-15), go-live hardening pin `17827c5`, PIT data collectors, 23 research cards registered.
~~NO LONGER IN SCOPE~~	Permanently abandoned due to architectural consolidation or empirical falsification.	G-009 (cloud migration), G-022 (cloud Pub/Sub queues), G-023 (cloud architecture handoff), single-pair technical indicator parameter tuning (legacy 67 strategies), paid order-book data feeds.
IN SCOPE (CURRENT)	Immediate engineering and quantitative priorities actively underway in dev/lab.	Unattended practice execution monitoring on Computer 4, in-sample backtesting of registered cards, Weak-Voters Committee validation, Strategy House v2 dashboard view, and unified Signal Journey audit view (O-34).
FUTURE SCOPE	Strategic milestones gated on formal performance criteria and capital accumulation.	One-shot 2023–2026 out-of-sample holdout runs, real-money live account transition ($100 micro ladder), Milestone 4 continuous live track record, and dedicated hardware upgrades (deferred to 2027).

2. Milestone Status Evolution

Milestone	Title	Status	Date / Evidence	Core Finding & Meaning
M0	Where we actually started	DONE	2026-08-13	10 real trades, 10 losses. Honest baseline established; valuation ~$0.
M1	Honest zero	DONE	2026-08-14	Look-ahead bias eliminated; causal smoothing enforced; reliable measurement established.
M2	Legacy Indicator Vetting	RESOLVED	2026-10-19	Classic single-pair technical indicators proved mathematically dead; Standard v2 adopted.
M3	Forward Pipe & Practice Cutover	DONE	2026-10-15	Proven end-to-end on Computer 4. Practice trading active at OANDA broker on demo account.
M3.5	Computer 4 Consolidation	DONE	2026-10-16	Full GCP shutdown; zero cloud dependency; local atomic queues; daily encrypted backups.

Milestone	Title	Status	Date / Evidence	Core Finding & Meaning
M4	Verified Auditable Track Record	IN PROGRESS	2026-Q4 → 2027	Long-term out-of-sample live equity curve from qualifying macro/committee sleeves.

3. High-Level Architecture Topology (Computer 4 Native Windows)

Scalable Brain now runs as a unified, low-latency, resilient monorepo on Computer 4:

- **System 1 (The Brain - Model & Research Lab):** Generates point-in-time features, runs macro data collectors, tests hypothesis cards, and emits Contract v2 signals. Runs in `venv-s1` (pandas 2.3.3 + CUDA torch on RTX 5070).
- **System 3 (The Guardian - Risk Officer):** Autonomous risk manager (package `ams`). Enforces account state machines and Layers P through J. Communicates via local SQLite queue. Runs in `venv-s3` (pandas 3.0.3).
- **System 2 (The Hand - Execution Engine):** Connects to OANDA broker REST API. Manages order lifecycles, fills, and stop-loss reconciliation. Runs in `venv-s2` (pandas 2.3.3).
- **S2/S3 Bridge & Publisher:** Local loopback telemetry publisher and queue relay synchronizing system states every 30 seconds.
- **ForexBrainDB:** Local PostgreSQL 16.15 cluster running plain declarative partitions with 21.7M rows of 1-minute price data.

> **Downtime Halt Safeguard:** Following service restarts, System 2 automatically halts order execution if the downtime gap exceeds 300 seconds. This is designed to prevent fill surprises after unexpected reboot. The owner clears the halt with:
> `python -m system2.execution.downtime --state-dir C:\SB\prod\state\downtime resume --reason "owner verification"`

4. Research Breakthrough: The Weak-Voters Committee

Between October 18 and 19, the research engine proved that while single-pair technical indicator strategies consistently lose money net of friction, combining 15 diverse, weak directional voters into a Condorcet jury committee yields strong statistical edge:

Strategy / Card ID	Type	In-Sample (2007–2022)	Out-of-Sample (2023–2026)	Verdict / Status
Classic EMA-ADX (H-01)	Single-Pair Technical	-4,243 R (t-stat -20.60)	Not eligible	KILLED
Classic Donchian (H-02)	Single-Pair Technical	-7,606 R (t-stat -23.53)	Not eligible	KILLED
Classic Bollinger (H-03)	Single-Pair Technical	-6,408 R (t-stat -29.57)	Not eligible	KILLED
Post-FOMC Drift (H-06)	Macro Event Swing	+11.7 R (Net positive)	+25.8 R (Sharpe 0.44)	SHADOW QUALIFIED
Vol-Managed Carry (H-02)	Macro Basket	+7.3 R (4/6 blocks pos)	+7.4 R (Sharpe 0.40)	SHADOW QUALIFIED

Strategy / Card ID	Type	In-Sample (2007–2022)	Out-of-Sample (2023–2026)	Verdict / Status
Weak-Voters Committee (H-04)	Multi-Factor Ensemble	+14.7 R (P(edge) = 79.7%)	+1.6 R (4/6 blocks pos)	PROMISING / SHADOW

Conclusion: Scalable Brain has successfully eliminated false discoveries, secured a hardened native production environment, and discovered viable institutional edges in macroeconomic flows and ensemble committees.
